

# KIA Air Sanitisation Treatment

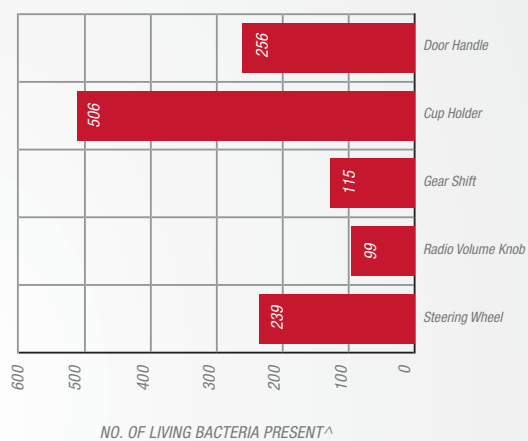

GIVE YOUR VEHICLE A FRESHEN UP BY SANITISING THE AIR VENTILATION SYSTEM.

## Why invest in Air Sanitisation:

1. Kill off bacteria, mould, germs and allergens
2. Experience cleaner air through the air vents
3. Keeps working long after treatment

All vehicle ventilation systems are a breeding ground for a wide variety of micro-organisms including mould, bacteria and germs. And regardless of how old the vehicle is, every time the fan is turned on, harmful spores are blown into the air drivers and passengers breathe. Choose a freshen-up now with an interior sanitisation treatment and provide your passengers with clean, bacteria free air from today onwards!

At Kia, we have developed the industry best anti-microbe bacterial and decontamination system. This in-vehicle sanitisation is an environmentally friendly, water-based solution that forms an invisible, long lasting barrier that actively protects surfaces from the build-up of organic matter including bacteria, moulds, germs and allergens.

## Did You Know:

Your centre console is a prime spot for germs, with an average of 506 germs per 6.5cm<sup>2</sup>.

That's almost double that of any other spot in your vehicle.

Protect your family's health & safety against infectious viruses and mould. Organise a treatment through the Kia Service Department Advisors.
