

IMPORTANT - READ BEFORE USE

Please ensure that the system is fitted in accordance with the fitting instructions. It is important that you observe all outlined below.

Your REX Kit should contain:

1. 2 x Cross Bars, Buffer Strips and Undercover Strips
2. 4 x End Supports Assemblies
3. 4 x REX End Caps
4. 4 x Lock Barrels & Keys
5. 1 x Small Parts and Hardware Kit

KIT COMPONENTS

You will also require the following tools: Cutting Blade, Lead Pencil, Steel Rule, Measuring Tape, Plastic Pry Tools

ASSEMBLY OF CROSS BARS

Please check your Roof Rack box to ensure you have received all components. Read these instructions thoroughly before commencing installation. (Please contact your dealer if your KIT is incomplete)

1. Ensure that the Rail Bars are clean, free from dust and grease.
2. Pre-assemble the End Supports Assemblies into the Cross Bars. Take care to avoid your hand coming into contact with any sharp edges. Remove all REX End Caps from Cross Bars to allow access for assembly of parts.
3. Slide the End Support Assembly along to the desired position approximating its fixed position on the vehicle's rails (Fig. 1). The Strap is to be held extended to allow the End Support Assembly to be located onto the Rail Bars (Fig. 2).
4. Place the Cross Bars the vehicle rail at the desired locations (Fig. 3). The front Cross Bars should be located 170mm forward of the B-Pillar, while the rear Cross Bar should be placed 1070mm behind the B-Pillar (Fig. 5).
5. Mark out the End Support Assembly bedding position on the Rail Bars and the corresponding position on the Cross Bar (Fig. 4). This marked position will indicate the required cut length of the Undercover Strip (A) (Also refer to Fig. 7).
6. Remove Cross Bars from the vehicle.

FIG 5

FITTING INSTRUCTIONS

PREPARING UNDERCOVER STRIPS

7. With the Cross Bars removed, line up the undercover strip with the cut-out on the Cross Bar. Ensuring the 'Undercover Strip edge' and the 'Cross Bar cut-out edge' are aligned, mark the Undercover Strip with a line that corresponds to the line you marked on the Cross Bar, as instructed in Step 4 of page 1.
8. Using a Steel Rule and a Cutting Blade, score a straight line and snap off this piece from the length of Undercover Strip. This becomes Cut Length (A) as shown in (Fig. 6). Slide Cut Length (A) as far in as possible. Do this for all four (A) Undercover Strips.
9. Insert all four End Supports Assemblies and using the remaining Undercover Strip, insert into the remainder of the Cross Bar cut-out till fully covered. Cut to edge of Cross Bar for all four (B) Undercover Strips as shown in (Fig. 7).

INSTALLING LOCK BARRELS AND KEYS

10. Fully insert the key into the Lock Barrel and remove the clear plastic tubing covering the Lock Barrel (Fig. 8).
11. Pull the Key back out of the Lock Barrel approximately 3mm. With the Key in this position, depress the last large metal wafer before fully re-inserting the Key.
12. You may now release your finger from the metal wafer (Fig. 9). Ensure that all the metal wafers are now contained within the cylinder of the Lock Barrel.
13. Using your thumb and forefinger, insert the Key and Lock Barrel into the lock cavity until the Lock Barrel is fully inserted (Fig. 10).
14. Place your finger against the face of the Lock Barrel (to prevent it from being pulled out of the lock cavity), then remove the key with your other hand. If the key cannot be pulled out, then rotate the Lock slightly (with Key) and pull on the Key GENTLY until the Key can be removed (Fig. 11).
15. Leave unlocked for assembly. Repeat this process for the remaining Lock Barrels.
16. Record Key code numbers so replacement Keys can be supplied in case they are misplaced.

CROSS BAR FITMENT TO VEHICLE

7. Pull back the Buffer Strip to allow access to the end of the Cross Bar. Insert Endcap into the Cross Bar by locating the two 'feet' of the REX End Cap into the void inside the Cross Bar (Fig. 13).
8. Push through until the REX End Cap edge comes to rest against the edge of the Cross Bar. This is important as the Locking Actuator inside the REX End Cap has to locate within the Locking slot on the end of the Cross Bar (Fig. 14).
9. Remove the Front Rail Covers using a Plastic Pry Tool (Fig. 15). Take care not to damage any of the external clips. There are six clips in total (Fig. 16).
10. Slide four of the Channel Nuts into the exposed channel, and place two near the end towards the mark made in Step 5 (Fig. 17). Ensure that the ribbed face of the Channel Nut is facing outwards towards the other vehicle rail.
11. Place the Front Rail Cover back onto the rail, taking care to align the plastic tabs back into the rail (Fig. 18). Ensure that all clips have clicked back into place.
12. Place the assembled Roof Racks back onto the vehicle's rails in the same position as initially determined (Fig. 19). Ensure that both bars are parallel and square to the front and rear axis of the vehicle and that the metal straps have located correctly against the rails ensuring the holes in the Strap align with the Channel Nuts in the rail (Fig. 20). The Strap should not overhang the rail or be visible from the top or bottom of the rail.
13. Using the Security Key provided, fasten the M6 bolts into the rail and proceed to tighten the M8 bolts whilst alternating sides to ensure even tension is achieved across the Cross Bars (Fig. 21).

To ensure robust attachment, turn screw through 4-5 full revolutions after achieving a snug condition between the End Support Assembly & Inner Strap against the rail bar (i.e. 4-5 turns after eliminating all free-play in system).

FINAL CHECK

9. After loading the Roof Racks, check the tightness of all bolts and ensure that the metal straps are positively engaged and tight up against the vehicle's rails.
10. Ensure the REX End Cap is locked against the Cross Bar by turning the Key 90° anti-clockwise to the locked position (Fig. 24).
11. Store the keys in a safe location, for example, car key chain or glove compartment of vehicle.

**GENERAL USAGE INFORMATION****REGULARLY CHECK THE TIGHTNESS OF LOCKING STRAPS.**

Loads should be evenly distributed and secured. A number of accessories for carrying special loads are available. Only use **NON-STRETCH** tie down straps.

Any weight carried on the vehicle will adversely affect its handling particularly in cornering or in a cross wind and the vehicle should therefore be driven with increased caution. Refer to the attached load rating sheet for carrying capacity.

For full warranty information, visit our website: www.rola.com.au.

IMPORTANT - READ BEFORE USE

Please ensure that the system is fitted in accordance with the fitting instructions. It is important that you observe all outlined below.

**SAFE USAGE**

It is essential for the proper assembly, operation and use of the Roof Rack that the instructions and safety precautions supplied are strictly observed.

Loads should be evenly distributed across the Cross Bar length and width. Always ensure that the load has a low centre of gravity. Fasten the load securely against sliding and check regularly for correct positioning.

The Roof Rack and roof load must not project beyond the body of the carrying vehicle. The load must not extend beyond the sides of the Roof Bars. Long loads should be positioned centrally on the Roof Rack and securely fastened at the front and at the rear. Narrow and heavy loads should be carried as close to the End Supports as possible. It is your responsibility to comply with statutory requirements regarding the projection of your load.

- Ensure load is sufficiently secured with straps.
- Do not use elasticised or "occy" straps.
- Do not use damaged or frayed straps.
- Use separate tie downs for each Roof Rack.
- Check the security of your load and the tension of the bolts and fastenings of the Roof Rack before departing and at regular intervals during your journey.
- A specialised Roof Rack accessory should be used to carry or secure your load when available (eg, Bike Carrier, Water Craft Carrier).
- The maximum permissible load for your vehicle Roof Rack is the lower of the maximum load capacity specified in your vehicle operation manual, or specified as applying to the Roof Rack. Do not exceed the maximum specified load capacity.
- Maximum permissible load = weight of the Roof Rack + weight of accessories + weight of load (cargo).

The mounted & loaded Roof Rack will affect your vehicle's handling characteristics, particularly relating to crosswind sensitivity, corners, bends and braking behaviour. Exercise care when driving and adjust for the change in vehicle handling and braking behaviour by always driving safely and at a speed appropriate to travel conditions and the load being carried.

Wind resistance is the number one cause of Roof Rack failures. Prior to securing a load, consider the surface area of the load to determine the suitability of carrying the load on the Roof Racks. Extra caution should be taken when travelling in high winds, at high speed, or when carrying loads with large surface areas (eg tables, bed bases and mattresses, sheets of wood).

Surfboards should be loaded on top of each other rather than side by side.

**MAINTENANCE**

The Roof Rack should be removed regularly to clean adjoining vehicle surfaces, attaching locations and the Roof Rack itself. It is your responsibility to ensure that the Roof Rack is adequately maintained.

You should routinely and regularly check the proper functioning of your Roof Racks, and tighten all screws, bolts, connections and straps. Immediately replace any worn or damaged components.

Remove Roof Rack before entering an automatic carwash.

When not used to carry load, the roof-rack should be removed. This will also increase fuel efficiency when not in use.

We recommend that you store the Roof Rack Security Key and Fitting Instructions in the glove compartment of your vehicle.
