

Fitting Instructions #TRCARMIS

SuperPro Control Arms

1. Observe positioning and fitment of original control arm;
2. Use safe working systems of jacks and/or hoists to raise and support the vehicle, and remove the wheels;
3. Note it may be necessary to do the following: remove the shock absorber or Swaybar link, support the steering knuckle/brake rotor to allow removal of original control arm and fitment of new control arm;
4. During removal, take extra care to not stretch any cables/lines;
5. Install the new Roll Control Arms securely in the vehicle, torque all fasteners according to the 'General Torque Specification' table or the manufacturer's specification;
6. It is highly recommended that your vehicle is wheel aligned after the installation is complete.
7. Always recheck the installation after 1000 kilometres of use.

Please Note:

- o The use of this SuperPro Roll Control product will result in a change to the handling characteristics of your vehicle;
- o Please drive carefully until you are familiar with the improved handling;
- o SuperPro does not take responsibility for incorrect fitment of Roll Control products;
- o In certain Countries the fitment of aftermarket parts may not be permitted;
- o Please make sure of laws prior to fitment;
- o The Vehicle owner and user are solely responsible for the legality and safety of the vehicle modified using SuperPro Roll Control Products.

General Torque Specification								
Size	Class 8.8				Class 10.9			
	Lubricated		Dry		Lubricated		Dry	
	Nm	lb-ft	Nm	lb-ft	Nm	lb-ft	Nm	lb-ft
