

Fitting Instructions #3880IS

Toyota Aurion GSV40R / Toyota Camry XV40 Series

Rear Hub Bushes

- Support vehicle on jack stands/hoist, remove rear wheels, trailing arm and lateral arms you are replacing;
- Remove the hub assembly and the original bushes can be removed by using a press;

Note: Due to the awkward position of the Rear lateral arm outer bush, you may alternatively burn/cut the bush out.

- Insert the new bushes into the hub with reference to the diagram above;
- Apply the supplied white grease to the bore of the bush and the steel crush tube;
- Refit trailing arm/lateral arms using manufacture torque settings and carry out wheel alignment.
