

## SuperPro Nissan Rear Sub Frame Traction Kit

SuperPro has released a complete rear Kit for the rear of various Nissan 180SX, 200SX, 300ZX and Skyline models for Performance, Traction and Drifting.

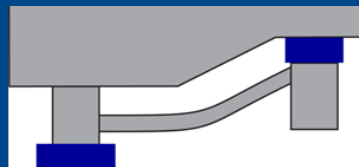

**Performance Setting** – Fitting the Kit in this way gives no differential alignment change. This leads to minimal compliance in sub-frame bushes and mounts and maximum performance.

**Traction Setting** - Fitting the Kit in this way the Differential is inclined for rear squat. This forces the rear of the vehicle down for maximum traction.

**Drift Setting** - Fitting the Kit in this way the Differential is inclined upwards for anti-squat. This leads to the reverse of the traction setting and delivers minimal traction, ideal for drifting.
