Performance Pitch-Stop Mount

Page 1 of 2

N.B: This instruction sheet should be used in conjunction with the workshop manual and proper safety procedures followed.

Application: - Honda Civic
- 10th Generation
- Including Type R

Contents: - 1x Billet alloy mount
- complete with poly bushings

WHITELINE pitch-stop mount offers improved gear shift feel with better gearbox response.

Increased NVH will be experienced

- Raise vehicle evenly and safely support.
Never rely on a Jack only

- Un-bolt OE mount by loosening and removing the 2 bolts - 17mm and 19mm.

- Once removed, clean both clevises from any dirt or oil.

N.B: It is recommended that a licenced workshop or tradesperson carry out the above procedure and that workshop manual and relevant safety procedures are followed in addition to the above.

N.B: This instruction sheet should be used in conjunction with the workshop manual and proper safety procedures followed.

- Using supplied grease, grease bushing side faces (wipe off any excess). This will make install easier.
- Prior to install, push the front bolt into the front bushing as per RH image.

- Push mount into position - tighten both bolts to 80Nm
- Road test vehicle.
- It is recommended, bolts are re-checked after 100kms

N.B: It is recommended that a licenced workshop or tradesperson carry out the above procedure and that workshop manual and relevant safety procedures are followed in addition to the above.
